Q3

Step1: Open the GitHub

Step2: login with your id

Step3: Once you login,
then press the fork button in the upper left. ~~fording the repositorg~~.
So this will create an exact copy of the repository under your own username.

Step4: when the repository is created then you need to clone to your local development environment

Step5: A new branch for each change you want to make.
Replace fix-readme-type with a more descriptive name for your changes which you like.

Step6: Add the files you've changed and commit then with a descriptive message.

Step7: Create a pull request.
